

Surface Plate Calibration

Cal-Cert now provides complete accredited granite surface plate calibration and lapping for plates up to 30ft throughout the Northwest

Our highly skilled technician measures surface plate wear with a computerized calibration system using differential leveling feet. This system provides reliable surface evaluation with detailed diagrams showing measurement readings that clearly explain wear and deviation from the grade accuracy specification.

Lapping or resurfacing is provided to bring measurements within grade guidelines. This procedure involves grinding down the surface with an abrasive diamond dust and lapping plate to remove unwanted material. Our service technicians have the ability to resurface to any grade needed by your quality system.

Jon Rau - Surface Plate Specialist

Why Cal-Cert?

- ◇ We make it easy!
- ◇ We respond to your needs!
- ◇ We do it right!
- ◇ We are leaders in the industry!
- ◇ We love what we do!
